✦ GO LIVE

Concur + Power BI Expense Analytics

Interactive expense dashboards — coming soon to Finance & business teams.

Dear Team,

We are pleased to announce that the **Concur + Power BI Expense Analytics** solution will officially go live.

Starting on Monday, Finance and business teams will have access to a new set of interactive Power BI dashboards connected directly to SAP Concur — giving everyone a faster, richer, and always up-to-date view of expense data, without any change to the existing expense submission process.

What's changing

Starting on Monday, you will be able to use the new Expense Analytics dashboards to:

Interactive filters

Explore expense data by Cost Center, expense type, employee, and date range — directly in your browser.

Automatic refresh, twice a day

Data is always current with no manual intervention — no more outdated spreadsheet exports.

Period-over-period comparisons

Full history is preserved, enabling monthly, quarterly, and yearly trend analysis in a single report.

Cost Center spend review

Review spend and vendor concentration by Cost Center — for Cost Center owners and Finance leads.

One shared version of the numbers

Finance and all business units work from the same data — no reconciliation needed.

These dashboards are designed to simplify expense analysis, reduce manual reporting effort, and give every team the context they need to make faster, better-informed decisions.

Support and resources

We will be hosting **two 30-minute sessions** at **10:00 AM MST**:

Monday July 28 — walkthrough of the new reports created in Power BI.

Wednesday July 30 — your opportunity to share feedback on the reports shown.

Outlook calendar invitations have already been sent for both sessions.

We appreciate your collaboration and commitment to ensuring a smooth transition.

Thank you,

The Project Team
