## Concur + Power BI Expense Analytics

Interactive expense dashboards — coming soon to Finance & business teams.

Dear Team,

We are pleased to announce the release of our **Concur Dashboard** designed to provide greater visibility into users' expense data along our Cost Center areas.

### What's Included in the New Reports?

The new reports allow users to review and analyze:

**Expense type distribution statistics** — sum, average, median, and percentiles by expense category

**Amount distribution by spending bucket** — transaction counts across ranges from \$0 to \$2,500+

**Top outliers** — transactions exceeding the 95th percentile for their category, with Cost Object detail

**Employee spend patterns** — individual spend compared to peer averages within the same Org Unit

**Vendor concentration risk** — top vendors by total approved spend, percentage of total, and unique employees

**Weekend activity** — expenses submitted on Saturdays and Sundays, broken down by expense type

**Potential duplicate transactions** — same employee, vendor, amount, and expense type within 7 days

**Month-over-month variance** — spend changes by Cost Object, with automatic alerts when variance exceeds 50%

## Benefits

---

These reports help managers and team members:

Gain **greater visibility into expense data** across Cost Center areas without manual exports

**Identify outliers, policy violations, and concentration risks** faster with automatic alerts

Make **faster, better-informed decisions** with interactive views and user-defined filters

Work from a **single trusted source** shared across Finance and all business units — no reconciliation needed

You have been selected to participate in our next two sessions, where we will share our current dashboards. Afterward, we will use your input to release them to our other areas.

 **Monday July 28** — 30-minute walkthrough of the new reports.

 **Wednesday July 30** — 30-minute session to share your input on the reports shown.

Both sessions at **10:00 AM MST (2:00 PM ART)**. Outlook calendar invitations have already been sent.

---

Thank you,

**The Project Team**
