Concur + Power BI Expense Analytics

Interactive expense dashboards — coming soon to Finance & business teams.

Dear Team,

We are pleased to announce the release of our **Concur Dashboard** designed to provide greater visibility into users' expense data along our Cost Center areas.

What's Included in the New Reports?

The new reports allow users to review and analyze:

Expense data filtered by **Cost Center, expense type, employee, and date range**

Spending trends with period-over-period and multi-year comparisons

Cost Center spend and vendor concentration details

Always up-to-date data, automatically refreshed twice a day

Benefits

These reports help managers and team members:

Make **faster, better-informed decisions** with richer expense context

Access **current data at any time** — no manual exports or waiting for reports

Monitor Cost Center spend and vendor patterns independently

Work from a **single trusted source** shared across Finance and all business units

You have been selected to participate in our next two sessions, where we will share our current dashboards. Afterward, we will use your input to release them to our other areas.

 **Monday July 28** — 30-minute walkthrough of the new reports.

 **Wednesday July 30** — 30-minute session to share your input on the reports shown.

Both sessions at **10:00 AM MST (2:00 PM ART)**. Outlook calendar invitations have already been sent.

Thank you,

The Project Team
